

# Real Multi Beauty Device Skinable True Solution LED Massager

## Galvanic Ion Therapy

### What's Galvanic?

Galvanic technology works by using positive and negative currents. The benefits include smoother and clearer skin, as well as reduced wrinkles and skin tightening.

### Deep Cleansing (Positive(+) Ion)

Positive electrons attract dirt and impurities from the deep layers and pores to the skin's surface.

### Nutrition (Negative(-) Ion)

The negative electrons ensure the absorption of nutrients deep into the skin's layers.

## LED Light Therapy

**Red (625nm)** : Promotion of collagen production, Boosting elasticity

**Blue (465nm)** : Skin health improvements, Remove bacteria causing acne

**Green (525nm)** : Skin tone improvements, Calming irritated skin

## Microwave Soothing Massage

Micro-wave massage mode vibrates 12,000 times per minute. It promotes skin elasticity and V-line by massaging tight muscles of face.

## Ultrasound Massage (3Mhz)

Ultrasound delivers heat energy to deep in the dermal layer, causing a small injury. The body responds to this injury by creating more collagen, which in turn helps lift and tighten the skin.
